External Job Advert

IT Analyst – Microsoft AX Dynamics 2012

Reference: ADS006
Grade: 8
Department: IT
Based at: Gaydon
Reports to: ERP Solution Manager

Job Purpose:

Responsible for the definition, testing and delivery of an ERP manufacturing solution in to an automotive manufacturing environment.

Key Responsibilities & Tasks:

The ERP project at AML is in the final stages of development with some outstanding design issues. This role is to support the current IT ERP Leads and Business Leads in the delivery of key manufacturing functionality supported by the Microsoft AX solution.

- Ensuring all business requirements are captured and included in the AX solution as the build is delivered from the 3rd party consultancy firm.
- Ensure effective integration with both up and downstream business processes and system solution.
- Contribute to an understanding of key data elements that are required to support the solution
- Carry out unit test activities.
- Engage with Business Lead counterpart/s to understand, test and deliver the solution in to the business.
- Work with QA Team in the development of test plans.
- Support the preparation of training activities.
- Support User Acceptance Testing of AX supported business processes.
- Contribute to the definition of the rollout approach and support the cutover activities as required.
- Provide progress reporting in line with programme standards.

Qualifications & Experience:

- Typically a graduate or equivalent business experience in a suitable discipline.
- Experience of implementing ERP projects.
- Business analysis experience.
- Ideally in a Microsoft AX Manufacturing & Pre Production process environment as part of an ERP system implementation
- IT Delivery experience ideally in a manufacturing environment, experience of pre-production & purchasing processes an advantage.
- Excellent track record of delivering high profile projects.
- Experience in the design and delivery of ERP supported processes in to a manufacturing environment
- Ability to work in a cross functional team of IT leads, Business leads, project managers and support staff.
- Experience in the testing of an ERP solution in an integrated manner
- Microsoft Office tools.
